

The browser-native SQL school that lives where you already work.

SQL Master is a Chrome extension that turns every browser tab into an interactive SQL learning environment — with a built-in database engine, 130+ practice questions, AI-powered query generation, Google Sheets integration, and a LeetCode problem vault — all running locally, with zero setup and zero accounts.

THE PROBLEM

SQL is the #1 skill gap in data hiring. Over **67%** of data job postings require SQL, yet most tools force learners onto new platforms, demand cloud setup, or paywall practice beyond trivial exercises. Beginners abandon courses at **87%** rates. Professionals cycle between LeetCode, YouTube, and disconnected notebooks — with no continuity and no way to practice on their own data.

OUR INSIGHT

Learning SQL should feel like using SQL. By embedding a complete SQL environment (engine, datasets, lessons, AI) directly inside the browser, we collapse the gap between "studying" and "doing" to zero. **No tabs to switch. No setup. No excuses.** The browser becomes their classroom, IDE, and interview prep coach — all at once. Zero infrastructure cost for us, maximum convenience for them.

CORE CAPABILITIES — SIX MODULES, ONE EXTENSION

Learning Path

Structured curriculum across 8 categories (DDL, DML, Joins, Aggregations, Subqueries, Window Functions) with interactive examples on real datasets.

Practice Lab

130+ graded challenges (Easy → Hard) with instant SQL validation via in-browser SQLite (WASM), schema preview, streaks, and clause mastery.

AI Challenges

Upload any dataset (.csv/.sql), paste questions from ChatGPT/Gemini/Claude, solve in progressive unlock format with AI prompt generator.

AI SQL Assistant

Natural language → SQL powered by Groq API (free). Upload files, get syntax-highlighted queries with explanations, edit and run in-browser.

LeetCode Vault

Auto-captures SQL problems from LeetCode, stores with AI-generated solutions. Autofill feature writes solutions directly into LeetCode editor.

Sheets SQL

Injects a SQL panel into Google Sheets, letting analysts query spreadsheet data with real SQL. Bridges spreadsheet users and database thinking.

USER JOURNEY

REVENUE MODEL — WHAT USERS PAY

FEATURE	PRICE	WHAT USER GETS
Free Tier	₹0	All learning modules, all Easy + Medium practice questions (100+ Qs), AI SQL assistant, progress tracking, daily quests
Hard Questions	₹500 once	Unlock all Hard-level challenges permanently. Includes 30+ advanced questions (Subqueries, Window Functions, CTEs, Complex Joins)
LeetCode Autofill	₹100 once	Lifetime access to AI-powered autofill — auto-generates Intuition, Approach, Complexity + code and injects directly into LeetCode editor
Sheets SQL	₹100 once	Lifetime access to the Google Sheets SQL panel — run real SQL queries on any spreadsheet data, export results
Ad Revenue	Passive	Non-intrusive ads shown at two high-intent moments: when users attempt Hard questions (pre-unlock) and when uploading custom datasets

Why one-time pricing wins: Indian users resist subscriptions. One-time payments feel like "buying a tool" — higher conversion rates, zero churn, and users become permanent advocates. All payments via Razorpay (low 2% fee).

THE MARKET REALITY

The global SQL training market is valued at **\$4.2B (2025)** and growing at 14% CAGR. In India alone, **1.5M+ students** graduate from CS programs annually — most with zero hands-on SQL experience. LinkedIn reports SQL as the **#1 most-requested technical skill** across data analyst, BI, and backend roles worldwide. Yet the top tools — DataCamp (\$25/mo), LeetCode Premium (\$13/mo), Mode Analytics — all demand subscriptions, cloud setup, or both. The result: **87% of learners quit** before writing 50 queries.

WHY SQL MASTER DESERVES TO EXIST

Every SQL tool today asks learners to **leave their context** — open a new platform, create an account, configure a server. SQL Master inverts the model: **the entire classroom lives inside the browser they already use.** A full SQL engine (WebAssembly SQLite), 130+ graded problems, AI tutor, LeetCode integration, and Google Sheets querying — offline, zero-config, zero-account. No competitor offers this combination at any price, let alone free. It's not a feature — it's a **category of one**.

WHO WE'RE BUILDING FOR

CS Students (60%)

Placement prep for TCS/Infosys/product companies. Need structured practice, not theory. **Will pay ₹500** to unlock Hard questions before interview season.

Career Switchers (25%)

MBA's, Excel analysts pivoting to data roles. Google Sheets SQL is their gateway drug into database thinking. **Will pay ₹100** for Sheets SQL.

LeetCode Grinders (15%)

Already solving 2–3 SQL problems/day. Vault + Autofill saves 15 min per problem. **Will pay ₹100** for competitive edge.

REVENUE STREAM BREAKDOWN (MONTH 6)

Hard Qs Unlock	42%
Ad Revenue	25%
LeetCode Autofill	18%
Sheets SQL	15%

Competitive moat: Zero marginal cost (100% client-side), zero server infrastructure, zero AI API cost (user's own free Groq key). **~95% profit margin** from day one — a unit economics profile SaaS companies take years to achieve.

REVENUE PROJECTION — 6-MONTH GROWTH

MONTH 1–2 ₹15K 500 users · ads + early adopters	MONTH 3–4 ₹1.2L 2,000 users · all streams active	MONTH 5–6 ₹4.9L 5,000 users · viral loop kicks in
---	--	---

6-MONTH ACHIEVEMENT ROADMAP

M1 Publish on Chrome Store. Seed on r/learnSQL.	M2 Integrate ads (AdMob/Carbon). Enable Razorpay payments. First ₹5K revenue.	M3 Launch on Product Hunt India.	M4 Partner with 3 coding bootcamps. Add	M5 SEO-optimized landing page. LinkedIn	M6 5K active users. ₹4.9L monthly revenue.
